ACHIEVING IMMORTALITY?

We all have heard

about them-

The immortals.

In fairytales, myths, movies. I guess, we all have wondered... how it would be? Living forever?

Avoiding death has been a popular goal throughout the ages, and anti-aging elixirs have never been in short supply.

Although the best shot at immortality is still through one's legacy, there is hope on the scientific horizon that people may be able to live considerably longer than they do now.

It is a dream for some and a nightmare for others – but could living forever become a reality within our lifetime?

The answer coming out of the scientists is a resounding "Yes" and the world's richest men are taking on this new challenge – immortality.

But how? There are different theories and we will share some of them.

<u>Stopping bodies ageing</u> - If backup copies of cells can be created to replace malfunctioning ones, the new cells would be implanted in our flesh so they can take over when our system starts to degrade. This would mean we can refurbish our bodies time and again – like we replace faulty chips in a computer.

<u>Cryogenics and artificial intelligence</u> - Since 1972, Alcor in Arizona has preserved 149

clients, at £165,000 each... with the hope of bringing them back to life when technology advances enough. Some scientists hope to back up our personalities online so that if we die we could be downloaded to a robot or hologram, keeping us going well beyond our life expectancy.

Anti-ageing drugs We are talking about drugs called senolytics. They will remove the damaged sells in our bodies and these drugs should be effective in eliminating a number of age-related diseases.

This all might seem like an over-ambitious venture but ongoing life extension research projects have registered promising results.

If things continue in the same trajectory, the year 2050 has been projected to be the benchmark for when we will achieve immortality.

There are so many more interventions that may hold the key to securing our indefinite existence on mother earth. You can search.

Why is it important you to know that? - Because you are the future. This will happen to...you.

So...what are your thoughts about all that? Do you like the idea or not?

How do you imagine the world full with immortal people?

Or living like 1000 of years? You are going to have a lot of grandchildren. :D
Do you have any other theory on how this could be achieved?

Will the world become a better or worst place?

Would you like to live forever?

Do you have any questions about this? Share them. Expand this conversation. We will be waiting to hear your thoughts. See you in 1000 years. :D
